

## *Trident and First Call Dairy Service partner in Idaho*

**Abbotsford, BC – October 30<sup>th</sup> 2018** Trident partners with First Call Dairy Service, a provider of advanced dairy management solutions, to help market Trident manure separation equipment, nutrient and bedding recovery technologies to dairy operations in Idaho. Dairy farming has a long rich history in Idaho and areas like the Magic Valley or Treasure Valley are densely populated with dairy farms, including some of the largest dairies in the United States.

The owner of First Call Dairy Service, Oren DeVries, has been working in the dairy industry for over 30 years, and was involved in some of the nation's largest dairy projects. "Effectively recovering and managing the nutrients from animal waste is the goal for many Idaho dairy farmers, and I look forward to helping my customers with Trident's technologies" explains the Idaho native DeVries.

Derick Van Nes, Trident VP Agriculture Sales & Sustainability, continues "Our system also recovers the water from dairy cow manure and allows to recycle huge volumes of flush water on the dairy. Aside from the obvious environmental benefits this also creates a key benefit from an operational perspective."

To learn more about Trident technologies and manure separation email Derick Van Nes or call +1.778.823.1976.
